I – READING (10 Marks)

Read the following passage and answer the questions below:

A website is a collection of different types of data, which can be anything like text, graphics, videos, etc, combined together to provide useful information. Websites are built for many purposes and uses. There are four types of websites: personal websites, business websites, informative websites and search engines. People started to use the web for different purposes and reasons. People are getting together under a single roof like websites to take collective action like never before. They’re posting opinions on online journals. They’re organizing political rallies on MoveOn.org; they’re volunteering articles for the online encyclopedia Wikipedia.

eBay for instance, has 61 million active members who list, sell, and buy millions of items a week. The whole market place works on the trust created by eBay’s unique feedback system by which people buy and sell items in online auctions. Pioneer e-tailer Amazon encourages its customers to sell items alongside its own books, CDs, DVDs and electronic goods. MySpace and Facebook are the latest phenomena in social networking sites, attracting millions of visitors to upload photos, and share information. In photo-sharing sites like Flickr, people not only share photos but also take time to attach tags to their picture, which help everyone to find where the photos are taken. YouTube allows its users to upload, view and share movie clips and videos. Millions of people use Google search engine to search for information on the Web. Skype on the other hand, looks like software that lets users to make free phone calls over the internet. Peer-to-peer network software such as BitTorrent allows user to swap songs. It is a protocol for transferring music, films, games, etc. sometimes illegally. When users download a torrent, by the way they are uploading it to another user.
